

## 9.1 Practice B

**In Exercises 1–6, find the values of the other five trigonometric functions of  $\theta$ .**

1.  $\sin \theta = \frac{3}{8}, \frac{\pi}{2} < \theta < \pi$

2.  $\cos \theta = -\frac{1}{3}, \pi < \theta < \frac{3\pi}{2}$

3.  $\tan \theta = 3, 0 < \theta < \frac{\pi}{2}$

4.  $\cot \theta = \frac{10}{3}, \pi < \theta < \frac{3\pi}{2}$

5.  $\sec \theta = -\frac{9}{5}, \frac{\pi}{2} < \theta < \pi$

6.  $\csc \theta = -\frac{7}{2}, \frac{3\pi}{2} < \theta < 2\pi$

**In Exercises 7–12, simplify the expression.**

7.  $\sin x(\cot^2 x + 1)$

8.  $\frac{\cot(-\theta)}{\cos(-\theta)}$

9.  $\cos\left(\frac{\pi}{2} - \theta\right) \cot \theta$

10. 
$$\frac{\tan^2 \theta - \sec^2 \theta}{\cos\left(\frac{\pi}{2} - \theta\right) \sec \theta}$$

11. 
$$\frac{\sin(-x)}{\tan(-x) \sec x} + \sin^2 x$$

12. 
$$\frac{\csc^2 x - \tan x \cot x}{\csc x - 1}$$

13. Describe and correct the error in simplifying the expression.

$$\begin{aligned}
 \times \quad \csc \theta \cot \theta \cos \theta &= \frac{1}{\cos \theta} \bullet \frac{\cos \theta}{\sin \theta} \bullet \cos \theta \\
 &= \frac{\cos \theta}{\sin \theta} \\
 &= \cot \theta
 \end{aligned}$$

**In Exercises 14–17, verify the identity.**

14.  $\tan\left(\frac{\pi}{2} - x\right) \cos^2\left(\frac{\pi}{2} - x\right) = \cos x \sin x$

15. 
$$\frac{1 + \sin(-x)}{\cos x \tan x - 1} = -1$$

16. 
$$\frac{1 - \cos x}{\sin x} = \csc x - \cot x$$

17. 
$$\frac{1 + \sin \theta}{\cos \theta} + \frac{\cos \theta}{1 - \sin \theta} = 2 \sec \theta + 2 \tan \theta$$

18. Use the sine and cosine functions to verify the identity  $\tan x \cot x = 1$ .
